Summary

Manager, AML Data Analytics at RBC with 5+ years across banking, insurance and analytics. Builds Python, PySpark and SQL pipelines over 40M+ records and Tableau dashboards for AML risk, cutting quarterly risk reporting from 3 weeks to 4 days. Also experienced in AI/LLM evaluation (RLHF).

Skills

AML & Risk: Transaction Monitoring, Enterprise Risk Assessment, SAR/STR Reporting, FINTRAC Compliance, KPI/KRI Dashboards

Programming & Analytics: Python, SQL, PySpark, pandas, NumPy, Scikit-Learn

BI & Data Engineering: Tableau, Power BI, Dataiku, Alteryx, Apache Spark, Data Pipelines (ETL), Data Migration, Data Warehousing

Databases & Cloud: Teradata, IBM DB2, PostgreSQL, Snowflake, AWS, Azure

AI & LLM Evaluation: LLM Evaluation, RLHF, Prompt Engineering

Experience

RBC · Permanent Full-time **Nov 2025 – Present**

Manager, AML Data Analytics *Toronto, Ontario, Canada (Hybrid)*

- Re-engineered legacy SAS data-extraction scripts into Python and SQL using pandas, PySpark and Dataiku, processing 40M+ records across multiple source systems.
- Built Python and PySpark Extract-Transform-Load (ETL) pipelines that pull client and transaction data from Teradata and IBM DB2, using Apache Spark distributed processing for high-volume datasets.
- Developed enterprise-level Python scripts with custom aggregation and calculation logic to risk-rate clients, transactions and geographies across 12+ business lines (40M+ customer records) for Anti-Money Laundering (AML) monitoring.
- Designed Tableau dashboards that present final AML risk calculations to stakeholders in a clear, decision-ready format.
- Migrated the full code base and end-to-end workflow into Dataiku, automating extraction, risk calculation and reporting and cutting quarterly risk report preparation from 3 weeks to 4 days (∼70% faster).

Outlier · Freelance **May 2024 – Sep 2025**

Data Science & Analytics Consultant *Canada (Remote)*

- Evaluated and ranked large language model (LLM) outputs for Python, SQL and data science tasks, scoring accuracy, reasoning and instruction-following against rubrics to build human-feedback training data for generative AI models.
- Performed code review and model evaluation by writing and validating Python and SQL solutions with test cases, identifying logic errors, incorrect joins and aggregations, and edge-case failures in AI-generated code.
- Applied prompt engineering to create prompts and expert reference answers for data analysis, SQL query writing and pandas data-manipulation scenarios, used to train and test AI model performance.
- Performed data annotation and quality assurance on structured and unstructured datasets using labeling guidelines and data quality checks to keep AI training data accurate and consistent.
- Contributed to Reinforcement Learning from Human Feedback (RLHF) workflows, comparing model outputs and writing rationales used to refine model behavior.

RBC Insurance · Co-op **Sep 2023 – Apr 2024**

Financial Data Analyst *Mississauga, Ontario, Canada (Hybrid)*

- Performed insurance data analysis, calculating claims and premium figures and building data models and calculation logic in SQL and Python to support claims and premium reporting for RBC Insurance business teams.
- Led the migration of RBC Insurance data workflows from Alteryx to Dataiku, re-creating pipelines with visual recipes, Python and SQL and automating monthly runs with Dataiku scenarios.
- Extracted and joined data from three enterprise platforms (IIPM, ServiceNow, Archer) through the data lake using SQL and Dataiku, delivering unified datasets and Tableau and Excel reports for decision-making across risk, compliance and enterprise operations teams.
- Automated third-party vendor document analysis in Python (PDF keyword scanning and context extraction) for risk and compliance reviews, and built an AES/Fernet encryption and decryption framework to protect sensitive employee data.

PumPumPum · Permanent Full-time **Jan 2021 – Aug 2023**

Data Analyst *Gurugram, Haryana, India (Hybrid)*

- Analyzed lease portfolio and customer data (5,000+ active leases) to track churn, early terminations and renewal trends, segmenting by vehicle type, lease term and customer profile to flag high-risk accounts.
- Partnered with Sales, Finance and Operations stakeholders to define 12 KPIs (renewal rate, early termination rate, delinquency rate, customer retention rate), aligning analytics with business and growth strategy.
- Analyzed 2,000+ customer satisfaction survey responses to identify the drivers of renewals and early terminations, such as service quality, pricing and contract flexibility, using Python to rank their impact.
- Managed and optimized MySQL, SQL Server and Oracle databases supporting lease, payment and customer reporting, improving query performance by 30% across data warehousing and pipeline workloads.

Education

University of Windsor **Sep 2022 – Apr 2024**

Master's degree, Master in Applied Computing

Galgotias University **Sep 2017 – May 2021**

Bachelor of Technology, Computer Science
